## 1. Description 产品介绍

### 1.1 General Description 产品描述

The White LED, which was fabricated by using a blue chip and the phosphor.

Product Package: 2.2mmX1.4mmX1.3mm.

LED

2.2mmX1.4mmX1.3mm

### 1.2 Features 产品特征

PLCC2 Package. PLCC2

Extremely wide viewing angle.

Suitable for all SMT assembly and solder process.

Available on tape and reel.

Moisture sensitivity level: Level 2.

Compliance with RoHS and REACH.

SMT

Level2

RoHS REACH

Qualifications: The product qualification test plan is based on the guidelines of AEC-Q101 Stress Test Qualification for Automotive Grade Discrete Semiconductors  
AEC-Q101

### 1.3 Application 产品应用

Automotive Interior Lighting.

Switches.

### 1.4 Package Dimension 封装尺寸

Fig.1-1 Top View

Fig.1-2 Side View

Fig.1-3 Bottom View

Fig.1-4 Polarity

Fig.1-5 Soldering Patterns

#### Notes

1. All dimensions units are millimeters.
2. All dimensions tolerances are  $\pm 0.2\text{mm}$  unless otherwise noted.

0.2

## 1.5 Product Parameters

 Table 1-1 Electrical / Optical Characteristics at  $T_s=25^\circ\text{C}$ 

Item	Symbol	Test Condition	Value			Unit
			Min.	Typ.	Max.	
Forward Voltage	$V_F$	$I_F=5\text{mA}$	2.4	2.8	3.0	V
Reverse Current	$I_R$	$V_R=5\text{V}$	Not designed for reverse operation			$\mu\text{A}$
Luminous Intensity	$I_V$	$I_F=5\text{mA}$	43	60	80	mcd
Viewing Angle		$I_F=5\text{mA}$	---	120	---	deg
Thermal Resistance.	$R_{THJ-S}$	$I_F=5\text{mA}$	---	300	---	$^\circ\text{C}/\text{W}$

 Table 1-2 Absolute Maximum Ratings at  $T_s=25^\circ\text{C}$ 

Parameter	Symbol	Rating	Units
Power Dissipation	$P_D$	90	mW
Forward Current	$I_F$	30	

## Notes

1. 1/10 Duty cycle, 10ms pulse width. 10ms, 1/10.

## 1.6Bin Range Of Forward Voltage and Luminous Intensity (IF=5mA)电压与发光强度分 BIN 范围(IF=5mA)

Table 1-3

V <sub>F</sub> V	E1	E2	F1	F2	G1	G2
	2.4-2.5	2.5-2.6	2.6-2.7	2.7-2.8	2.8-2.9	2.9-3.0
IV(mcd)	E1	E2	F1			
	43-53	53-65	65-80

## 2.4 Reliability Test Items And Conditions 信赖性测试项目及条件

Table 2-3 Reliability Test Items And Conditions

cJETcl 55.8 53.544 reW\* n

Test Items	Ref. Standard	Test Condition	Time	Quantity	Ac/Re
Reflow	JESD22-B106	Temp:260 max T=10 sec	2times	20pcs.	0/1
Thermal Shock	JEITAED-4701 300307				

High Temperature High Humidity Life Test	JESD22-A101	85 / 85%RH If=5mA	1000hrs.	20pcs.	0/1
Temperature Humidity Storage	JEITA ED-4701 100 103	TA=85 RH=85%	1000hrs.	20pcs.	0/1

## 2.5 Criteria For Judging Damage 失效判定标准

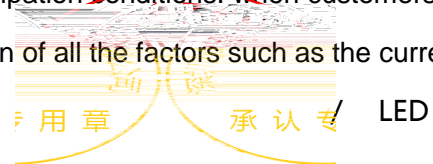

Table 2-4Criteria For Judging Damage

Test Items	Symbol	Test Condition	Criteria For Judgement	
			Min.	Max.
Forward Voltage	$V_F$	$I_F=5mA$	-	U.S.L*)x1.1
Reverse Current	$I_R$	$V_R = 5V$	-	U.S.L*)x2.0
Luminous Flux		$I_F=5mA$	L.S.L*)x0.7	-

### Notes

- 1.U.S.L: Upper standard level                      L.S.L: Lower standard level
- 2.The above reliability tests is based on the verification of a single/strip LED of Refond's existing experimental platform,the reliability experiment was taken under good heat dissipation conditions. when customers applies the LED to the series and parallel circuit, should take consideration of all the factors such as the current, voltage distribution, heat dissipation and others.

LED

3.The technical information shown in the data sheets is limited to the typical characteristics and circuit examples of the referenced products. It does not constitute the warranting of industrial property nor the granting of any license.

### 3. SMT Reflow Soldering Instructions SMT 回流焊说明

#### 3.1 SMT Reflow Soldering Instructions SMT 回流焊说明

Fig.3-1 SMT Reflow Soldering Instructions SMT 回流焊说明

Table 3-1 Reflow parameters 回流焊参数

Average temperature rise speed	$T_{smax}$ $T_P$	3 °C/ Max 3 °C/ s
Preheating: minimum temperature	( $T_{smin}$ )	150 °C
Preheating: Max temperature	( $T_{smax}$ )	200 °C
Preheating: Time	$T_{smin}$ $T_{smax}$	60 - 120 60s-120s
Time limited to maintain high temperature: the temperature	( $T_L$ )	217 °C
Time limited to maintain high temperature: The Time	( $t_L$ )	60 Max 60s

Peak /Classification of temperature: / (T <sub>P</sub> )	260 °C
Time limit classification of peak temperature time t <sub>p</sub>	10 Max 10s
(T <sub>P</sub> ) 5 °C Hold time within 5 °C with the actual peak temperature (TP)	30 Max 30s
Cooling speed	6 °C/ Max 6 °C/ s

25 °C

 Needed time from 25 °C to T<sub>p</sub>

8 Max 8 minutes

### 3.1.3 Cautions

(1) The encapsulated material of the LEDs is silicone. Therefore the LEDs have a soft surface on the top of package. The pressure to the top surface will be impacted on the reliability of the LEDs. Precautions should be taken to avoid the strong pressure on the encapsulated part. So when use the picking up nozzle, the pressure on the silicone resin should be proper. LED

LED

(2) Components should not be mounted on warped (non coplanar) portion of PCB. After soldering, do not warp the circuit board. LED PCB

(3) Do not apply mechanical force or excess vibration during the cooling process to normal temperature after soldering. Do not rapidly cool device after soldering.

## 4. Handling Precautions 产品使用注意事项

### 4.1 Handling Precautions 产品使用注意事项

(1) LED operating environment and sulfur element composition cannot be over 100PPM in the LED mating usage material. This is provided for informational purposes only and is not a warranty or endorsement. LED 100PPM.

(2) In order to prevent ex-ternal material from getting into the inside of LED, which may cause the malfunction of LED, the single content of Bromine element is required to be less than 900PPM, the single content of Chlorine element is required to be less than 900PPM, the total content of Bromine element and Chlorine element in the external materials of the application products is required to be less than 1500PPM. This is provided for informational purposes only and is not a warranty or endorsement.

1500PPM.

900PPM

900PPM

(3) VOCs (Volatile organic compounds) emitted from materials used in the construction of fixtures can penetrate silicone encapsulants of LEDs and discolor when exposed to heat and photonic energy. The result can be a significant loss of light output from the fixture. Knowledge of the properties of the materials selected to be used in the construction of fixtures can help prevent these issues. Refond advises against the use of any chemicals or materials that have been found or are suspected to have an adverse effect on device performance or reliability. To verify compatibility, Refond recommends that all chemicals and materials be tested in the specific application and environment for which they are intended to be used. Attaching LEDs, do not use adhesives that outgas organic vapor.

LED  
LED  
LED

(4) Handle the component along the side surface by using forceps or appropriate tools; Do not directly touch or Handle the silicone lens surface, it may damage the internal circuitry.

Fig 4-1 Handling Precautions

(5) In designing a circuit, the current through each LED can not exceed the absolute maximum rating specified for each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shift will cause big current change, burn out may happen. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage.

LED

## LED

(6) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color change and so on. Please consider the heat generation of the LEDs when making the system design. LED

## LED

(7) Compared to standard encapsulants, silicone is generally softer, and the surface is more likely to attract dust, requiring special care during processing. In cases where a minimal level of dirt and dust particles cannot be guaranteed, a suitable cleaning solution must be applied to the surface after the soldering of components. Refond suggests using isopropyl alcohol for cleaning. In case other solvents are used, it must be assured that these solvents do not dissolve the package or resin. Ultrasonic cleaning is not recommended. Ultrasonic cleaning may cause damage to the LED.

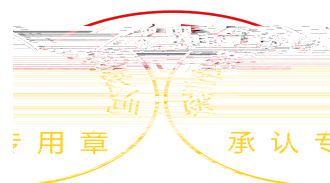

(8) If the moisture absorbent material ( silica gel ) has faded away or the LEDs have exceeded the storage time,baking treatment should be performed after unpacking and based on the following condition (  $65\pm 5$  ) °C for above 24 hours.

60 5 24

If the package is flatulence or damaged,please notify the sales staff to assist.

(9) Similar to most Solid state devices; LEDs are sensitive to Electro-Static Discharge (ESD) and Electrical Over Stress (EOS). LED

(10) Other points for attention, please refer to our relevant information.
